

Workshop 1: Building Real-World AI-Powered Apps Using Python and Azure OpenAI API

Date

Workshop Objective

 **Focus on automating repetitive tasks**

 **Use the official Azure OpenAI Python library**

 **Each mentee develops their own AI-powered tool**

 **Learn integration techniques and prompt handling**

Workshop Objective

Design and implement an AI-powered application that automates a repetitive task relevant to your own needs or interests

What you'll learn:

 **Integrate Azure OpenAI's API with Python code**

 **Automate text generation, summarization, or other processes**

 **Build useful assistants for various tasks**

 **Handle prompts effectively**

Application Options

Choose One or Define Your Own:

Email Draft Generator

Automate professional email creation

Data Entry Automation

Streamline data processing tasks

Meeting Notes Summarizer

Extract key points from meetings

FAQ Answering Bot

Create intelligent Q&A systems

AI Tools Usage Guidelines

 Tool	 Usage
Azure OpenAI Python SDK (openai lib)	Connect to ChatGPT models, send prompts, and process completions
Azure OpenAI API	Craft prompts for generating, summarizing, or transforming text

Team Composition & Roles

This workshop is designed for group of 7–9 members, each building their own AI-powered assistant. Collaboration happens informally through sharing progress and feedback.

Deliverables by End of Workshop

 **A working Python script/application that uses Azure OpenAI API to automate a chosen repetitive task**

 **Well-crafted prompt templates embedded in the code**

 **Basic user guide or instructions on using the AI assistant**

 **Short demo of the application in action**

Timelines

THANK YOU!
